

**Listing of Claims:**

1. (Currently amended) A gaming system, comprising:  
a central server configured to generate game results using fixed-pools of elements, ~~where~~ each element corresponding ~~corresponds~~ to a single game play result divisible into a base game play result and a bonus game play result, wherein play of the bonus game does not require an additional wager;  
a player terminal in operable communication with the ~~said~~ central server, configured to send game play requests to the ~~said~~ central server and receive game play results from the ~~said~~ central server; and  
the ~~said~~ player terminal further configured to determine a base game play result and a bonus game play result from a single game play result received from the ~~said~~ central server, to reverse-map the ~~said~~ base game play result into a display such that the ~~said~~ display shows game indicia having a value corresponding to the ~~said~~ base game play result, and further shows bonus game indicia, different from the ~~said~~ base game play display, having a value corresponding to the ~~said~~ bonus game play result, wherein the single game play result is a fixed sum that is awarded to the player.
2. (Currently amended) The gaming system of claim 1, wherein the ~~where~~ ~~said~~ bonus game indicia further comprises a plurality of indicium.
3. (Currently amended) The gaming system of claim 2, wherein the ~~where~~ ~~said~~ plurality of indicium is selectable, and where the ~~said~~ bonus result is divided into a set of partial win results that, in total, are an amount equal to the ~~said~~ bonus result, and where the ~~said~~ partial win results are awarded one at a time as a result of a selectable indicium being selected, until all of the ~~said~~ partial win results are awarded.
4. (Currently amended) The gaming system of claim 1, wherein the ~~where~~ ~~said~~ game play result further includes an indicator recognizable by the ~~said~~ player terminal, the ~~said~~ indicator indicating that the ~~said~~ game play result comprises a base game play result and a bonus game play result.

5. (Currently amended) The gaming system of claim 4, wherein the ~~where said~~ bonus game play amount is calculated by subtracting a known base game amount from the said ~~the said~~ game play result.
6. (Currently amended) A method of gaming on a gaming system, the method comprising:
  - enabling a fixed pool of game results, a game result being selectable upon a request from a player terminal;
  - selecting a game play result after receiving the game result request from a player terminal, wherein the game play result represents a fixed sum award having a base game play result and a bonus game play amount;
  - sending the game play result to the said ~~the said~~ player terminal;
  - receiving the game play result at the said ~~the said~~ player terminal;
  - determining a base game play result and a bonus game play amount from the game play result;
  - awarding the base game play result;
  - starting a bonus game;
  - enabling play of the bonus game, wherein play of the bonus game does not require an additional wager from the player; and
  - awarding the bonus game play amount.
7. (Currently amended) The method of claim 6, wherein the ~~where said~~ bonus game comprises a plurality of indicium.
8. (Currently amended) The method of claim 7, wherein the ~~where said~~ plurality of indicium is selectable, and ~~where~~ wherein the said bonus game play result is divided into a set of partial win results that, in total, are an amount equal to said bonus game play result, and wherein the said partial win results are awarded one at a time as a result of a selectable indicium being selected, until all of said partial win results are awarded.
9. (Currently amended) The method of claim 6 further comprising:

including, in the said game play result, an indicator recognizable by the said player terminal, the said indicator indicating that the said game play result comprises a base game play result and a bonus game play result.

10. (Previously presented) The method of claim 9 further comprising:

calculating the said bonus game play amount by subtracting a base game amount from the said game play result.

11. (Currently amended) A method of play in a gaming system, the method comprising:

receiving a wager on a game at a player terminal;

generating a game result request;

selecting a game result from a fixed pool of game results, wherein the game play result represents a fixed sum award having a base game play result and a bonus game amount;

determining the base game result and the bonus game amount from the selected game result;

playing the game and awarding the base game result;

starting a bonus game;

enabling play of the bonus game, wherein play of the bonus game does not require an additional wager from the player; and

awarding the bonus game amount.

12. (Currently amended) The method of Claim 11, wherein the ~~where~~ said bonus game comprises a plurality of indicium.

13. (Currently amended) The method of claim 12 further comprising:

dividing the said bonus game play amount into a set of partial win results that, in total, are an amount equal to the said bonus game result;

selecting bonus game indicium;

awarding one of the said partial win results; and

repeating the said selecting and awarding until all of the said partial win amounts are awarded.

14. (Currently amended) The method of claim 11 further comprising:

recognizing, in the said game result, an indicator indicating that the said game result comprises a base game result and a bonus game result.

15. (Currently amended) The method of claim 14 further comprising:  
calculating the said bonus game result by subtracting a base game result from the said game result.
